

Book a Meningococcal B Vaccine

Most meningococcal deaths in Australia are now caused by the B strain. Invasive meningococcal disease is rare but very serious and can become life-threatening quickly.

Vaccination information

- The current free school vaccination program does not include Meningococcal B

Note - In 2027, free Meningococcal B will be offered to Year 10 students

- Council offers the meningococcal B vaccine (fee applies)

Who should have the vaccine

- Adolescents and young adults (14+ years)
- Infants and young children from 6 weeks old
